You can now say that I am convinced that AGGRAND Fertilizer works and will increase commercial crop yields while saving money. Here is my story...

Producing large quantities of high quality hay can often be difficult, but I'm convinced that the addition of AGGRAND Fertilizer 4-3-3 has made it much easier and more profitable. I recently cut an 11-acre field of alfalfa and grass mixture – a field that in the past has produced 400 to 500 each of 50 pound bales. I knew the yield was going to be good but was thrilled when we cut 979 bales! We did have plenty of rainfall this summer, but I'm convinced from past experience that commercial fertilizer could not have come close to this kind of increase in production.

I applied AGGRAND Fertilizer, 4-3-3, about 10 days after the last cutting at the rate of 1 ½ gallons of AGGRAND 4-3-3 in 20 gallons of water per acre using large flood type nozzles. At about \$6.00 per bale just on this one cutting with AGGRAND I produced over 23,950 pounds more hay (479 bales X 50 pounds / per bale) and that means an extra \$2,874.00 (\$6/ per bale X 479 bales) to me.

When you figure that the cost of the Aggrand was much less per acre, actually less than \$40.00 per acre, than the commercial fertilizer, which is now over \$100.00 per acre in our area, along with the increased production, it is certainly a winning program. Also, the improved plant health, stronger roots, and better drought tolerance, when moisture is an issue, all add up to a long list of reasons to use more AGGRAND. Any smart farmer is going to see this immediately and use AGGRAND!

I am now so sure that AGGRAND is the right product that I am going to be selling it to other farmers in my area who want to make more money. Since I have been farming my whole life, no one has to tell me how hard it is to be a farmer and earn much money while taking good care of the land. AGGRAND is a proven way to do both, make more money and help improve the land.

Thanks for introducing me to AGGRAND. Watch for the results coming from my big corn and soybean crops next year. This product will help anyone grow anything better. AGGRAND working so well on my hay crop is more proof that it really works better than anything else.

Sincerely and a loyal AGGRAND customer,

John W. Gore
